

🎯 Quick-fire Betting Profits

Cash-Out Repeater Method

Andrew David

2). Next I simply scan through the games currently on offer and find a match from the Betfair 'In-Play' coupon that is currently showing at 1-1, 2-2 & 3-3 etc and priced around 1.40. **(We don't look at 0-0's!)**

3). Next when the price in that match to **LAY** the draw hits 1.40 (Usually 80th minute) I will **LAY** it to my £10 unit starting stake, meaning I have a liability of £4.00 at that point.

If **NO** goal is scored I will then make a further **LAY** for double my unit starting stake of £10. Therefore, I would next LAY for £20 at a price of 1.20 and my liability for that LAY would be £4.00. So for the 2 LAYS combined by total liability would be £8.00. Made up of a LAY at 1.40 for £10 = £4.00, and a following LAY if **NO** goal is scored of £20 at 1.20 = £4.00.

4). Next I wait for a goal to be scored to either team. If the goal is scored after I have placed my **FIRST** Lay of £10 then I will '**CASH-OUT**' there and then for a profit of around **£7.00 - £8.00**.

If a goal is scored after I've placed my **SECOND** Lay bet then I will also **CASH-OUT** even though it will be very close to the end of the game by this time. This will give me a profit ranging from £25 - £28 depending on how late this goal arrives.

Here's an example;

The screenshot shows the Betfair in-play betting interface for the match Auxerre vs Laval. The interface includes a navigation bar at the top with categories like Football, Horse Racing, Tennis, Cricket, Boxing, News & Tips, Forum, and Tradefair. The main content area displays the match details, including the score (Auxerre 1-1 Laval) and the time (81st minute). A 'Win Only Market' is shown with a 'Matched bets' table. The 'Matched bets' table has the following data:

Matched bets	Backer's odds	Backer's stake	Payout Liability
Lay (Bet Against)			
The Draw	1.4	£10.00	£4.00

Below the 'Matched bets' table, there are options for 'Bet info', 'Matched bets', 'Consolidate', and 'Average odds'. A red arrow points from the 'Matched bets' table to the 'The Draw' row in the 'Match Odds' table below. The 'Match Odds' table shows the following data:

Match Odds	Back all	Lay all
Auxerre	5.5 £289	6 £4
Laval	9 £13	11 £4
The Draw	1.38 £2	1.4 £129

A red arrow points from the 'The Draw' row in the 'Match Odds' table to the 'The Draw' row in the 'Matched bets' table. A text box with a red border contains the text: 'So here you can see i have placed my 1st Lay at 1.40 in the 81st minute at £10 for a £4.00 Liability.'

So if a goal is scored after my **FIRST** Lay bet I would **CASH-OUT!**

Match Odds

	5.8 £2	5.9 £2	7 £31	13 £59	40 £3
Auxerre					
Laval	8.8 £2	9.4 £2	11 £41	700 £2	
The Draw	1.16 £2	1.18 £10	1.2 £11	1.26 £26	1.27 £3, 1.28 £40

Receipt

Unmatched bets	Backer's odds	Backer's stake	Your liability
Lay (Bet Against)			
The Draw	1.20	£20.00	£4.00

Here i have placed my 2nd Lay for £20 at 1.20 for a total liability of £4.00 and this was in the 87th minute.

Again if a goal is scored after my **SECOND** Lay bet I would **CASH-OUT!**

Staking

This method is another that's ideal for the Extended Fibonacci sequence due to the winnings to losses ratio;

Extended Fibonacci Sequence:

1	1.5	2	2.5	3	4	5	6.5	8	10.5	13	17	21	27.5	34
£2	£3	£4	£5	£6	£8	£10	£13	£16	£21	£26	£34	£42	£55	£68
£5	£7.50	£10	£12.50	£15	£20	£25	£32.50	£40	£50	£65	£85	£105	£135	£170
£10	£15.00	£20	£25.00	£30	£40	£50	£65.00	£80	£105	£130	£170	£210	£275	£340

and so on...

(Points value is shown on the top of the table and the monetary value equivalent below if starting on £2, £5 or £10 stakes).

If we fail to get a goal by the end of the match we simply move up a step in the staking ladder above. If we get a goal whether after the first or second Lay we always **CASH-OUT** and go back to the start of the staking table above for our next qualifying match.

Conclusion

Here we have '15' chances to get a goal either after the **1st Lay** or the **2nd Lay** before we exhaust a sequence. As yet my highest point has been Step 10.

Remember statistically more goals are scored in the 2nd half rather than the first, with goals from the 81st minute onwards been the most popular.

Very little changes from leagues worldwide so this method can be applied to them all subject to at least £100,000 of in-play liquidity by the time you action your first Lay bet.

Games below that figure have too much price gapping between the Back & Lay price which is not good for us.

Finally, just make sure you only Lay in matches that are score draws and avoid 0-0's and you should clear some nice profits.

All the best!

Andrew David
